

The table facilitating the reading of world standard times through the longitudinal hour indicators of the E.R.S.C.

The table gives the world standard times of 264 places on earth. The places are inclusive of all the sovereign countries and some dependencies (o/d). Extensive countries are named repeatedly under different longitudinal indicators (l.h.i.) as they have more than one time zone. The empty spaces in the table are to accommodate any future changes in time alignments of places.
