

The U.G.T. is planet earth's cosmic time

It is as if a single clock keeps time for the whole world and the only longitudinal hour indicator that matters is the I.D.L. that is generally aligned along longitude 180°. Thus the time of the I.D.L. (or U.G.T.) applies authoritatively for the whole world in a cosmic manner, in unison with the earth's eastward rotation in space with reference to the position of the sun. It gives an insight into the Biblical saying "The first shall be last, and the last shall be first" when global priority in time within a 24-hour time-spectrum is required to be determined. I shall explain this with the following diagram.

Clock-face of an E.R.S.C. showing U.G.T. 3.00 hrs. of Thursday, November 30, 2000

The western side of the I.D.L. is imagined to be the head of an arrow and the eastern side its tail. When the head of the arrow has breached into Thursday, it is Thursday for the tail too in an U.G.T. sense, although the tail is in Wednesday. Thus the last (tail) becomes the first, and the first (head) becomes the last, because Wednesday is before Thursday.

Conclusion

I have put forward my case for using the U.G.T. to determine priority in global time anywhere on earth by discussing the H.I.V. / L.A.V. controversy. To use it effectively the exact time should be given to the nearest second. This is because the U.G.T. is a current moment of time that is applicable to the whole world instantly. Thus it has to be defined very exactly if anyone in one place wants to claim global priority in time over others in other places on earth. If the exact U.G.Ts. of the discoveries of the H.I.V. in Washington and the L.A.V. in Paris were known, then global priority in time could have been easily determined for one or the other party.

The U.G.T. could be used by any star-gazer to establish global priority in time for the sighting of any new heavenly body in space. Moreover all news media could use the U.G.T. to specify the times and dates of important events, as from the U.G.T. the corresponding local time and date of any place on earth can be easily figured out. I would like to propose that a central authority for the notification of the U.G.T. be set up preferably in Vanua Levu or any other place that is sited along or close to the International Date Line. It could give this information authoritatively through the telecommunication media to any interested party that requests for it in order to claim global priority in time for a discovery or for any other purpose. A glance at a correctly functioning clock-face of any of my E.R.S.Cs. can denote the current U.G.T. in addition to telling the local standard time of any place on earth.
